

Nidhi Agarwal

Senior Software Engineer | React, Node.js, JavaScript

Bengaluru, India | +91 8638721867 | dnidhi.agarwal@gmail.com

PROFESSIONAL SUMMARY

Senior Software Engineer with 6+ years of experience in designing, developing, and maintaining scalable web applications. Proficient in JavaScript, React, Node.js, Express.js, and MongoDB, with hands-on experience building responsive user interfaces, developing REST APIs, modernising legacy codebases, and optimising application performance. Experienced in delivering end-to-end features and collaborating within agile teams to build high-quality, user-centric solutions.

TECHNICAL SKILLS

JavaScript, React.js, Redux, Node.js, Express.js, MongoDB, REST APIs, Socket.IO, Puppeteer, Git, Postman, LLM Integration, Agile Methodologies

EXPERIENCE

Tracxn Technologies Limited · Senior Software Engineer

Aug 2023 – Present

- Responsible for planning, building and delivering end-to-end product features.
- Taking ownership of software components and associated development and testing.
- Updating old code base to modern development standards, improving performance and functionalities.
- Providing guidance and mentoring junior developers during development processes.
- Reviewing source code of other members of the team to ensure compliance with coding standards and best practices.

Tracxn Technologies Limited · Software Engineer

Aug 2021 – Jul 2023

- Built interactive, responsive and performant front-end interfaces using React.js.
- Implemented REST APIs to connect the application to the backend services.
- Maintained existing software systems by identifying and correcting software defects.
- Documented development processes and procedures for future use, improving the onboarding process for new developers.

Tracxn Technologies Limited · Automation Engineer → Senior Automation Engineer

Aug 2019 – Jul 2021

- Built configurable Search API (custom filters + sorting logic) in an agile delivery environment; maintained detailed project documentation and release records per company methodology.

KEY PROJECTS

LLM-Powered Signature Newsletter Generation *Node.js · Groq LLM · REST APIs · Puppeteer*

- Built Node.js job pipeline in the alert-notification system aggregating weekly startup ecosystem data — funding rounds, M&As, unicorns, and market index metrics — from Tracxn REST APIs; engineered Groq (Llama 3.3) prompts to generate factual newsletter summaries from structured JSON and news article content.
- Rendered HTML via email templates, captured TPX chart screenshots via Puppeteer, and emailed draft previews to the product team for human review before delivery to subscribed users.

Production-Scale Caching & Real-Time Platform Enhancements *React · Node.js · Socket.IO*

- Architected and implemented multi-layer caching (Cache Storage API, IndexedDB, Service Workers) and Socket.IO real-time updates for a high-traffic SaaS portal — reduced average API response time from 500 ms to 150 ms and improved perceived performance for enterprise users.

Legacy Codebase Modernisation *React · Redux Toolkit · JavaScript*

- Led incremental migration of a large legacy frontend: class components → functional hooks, Reflux → Redux Toolkit, and adoption of modern testing practices — improved maintainability, testability, and developer velocity across multiple application modules.

KPI Console — Internal Analytics Dashboard *Node.js · Express.js · MongoDB · React · Cron*

- Built config-driven KPI metrics platform: MongoDB-backed configuration, Node.js cron schedulers for automated data aggregation, Express.js API layer, and React dashboard enabling internal stakeholders to monitor business and operational metrics in real time.

EDUCATION

B.E. Computer Science & Engineering · Assam Engineering College, Guwahati

2014 – 2018 | 72.1%
